UMC Reports First Quarter 2022 Results

12i P3 Singapore expansion plan addresses long term structural demand in 22/28nm

First Quarter 2022 Overview[1]:

- **Revenue: NT$63.42 billion (US$2.22 billion)**
- **Gross margin: 43.4%; Operating margin: 35.2%**
- **Revenue from 22/28nm: 20%**
- **Capacity utilization rate: 100%+**
- **Net income attributable to shareholders of the parent: NT$19.81 billion (US$692 million)**
- **Earnings per share: NT$1.61; earnings per ADS: US$0.281**

Taipei, Taiwan, ROC – April 27, 2022 – United Microelectronics Corporation (NYSE: UMC; TWSE: 2303) ("UMC" or "The Company"), a leading global semiconductor foundry, today announced its consolidated operating results for the first quarter of 2022.

First quarter consolidated revenue was NT$63.42 billion, increasing 7.3% QoQ from NT$59.10 billion in 4Q21. Compared to a year ago, 1Q22 revenue grew 34.7% YoY from NT$47.10 billion in 1Q21. Consolidated gross margin for 1Q22 was 43.4%. Net income attributable to the shareholders of the parent was NT$19.81 billion, with earnings per ordinary share of NT$1.61.

Jason Wang, UMC co-president, said, "We started 2022 with solid first quarter, as strong wafer demand kept our fabs operating at full capacity. Although wafer shipments declined slightly, higher average blended pricing lifted our overall revenue. While we have observed general end-market's tapering of cyclical demand associated with the COVID-19 pandemic, UMC's business continued to be well supported by structural trends that are increasing silicon content in devices and driving new applications. Specialty technologies such as non-volatile memory, power management, RF-SOI, and OLED display drivers are necessary for applications across 5G, AIoT,

[1]Unless otherwise stated, all financial figures discussed in this announcement are prepared in accordance with TIFRSs recognized by Financial Supervisory Commission in the ROC, which is different from IFRSs issued by the International Accounting Standards Board. They represent comparisons among the three-month period ending March 31, 2022, the three-month period ending December 31, 2021, and the equivalent three-month period that ended March 31, 2021. and automotive mega-trends, and our strategy to focus on leading specialty technologies has been successful, which now contribute more than half of our wafer revenue. An increasing number of customers are recognizing the value of our customized specialty processes and forming long-term partnerships with UMC."

Co-president Wang said, "Looking ahead, we expect the positive demand outlook will remain unchanged despite some market volatility caused by the pandemic and geopolitical issues. The expansion at our Fab 12A P5 is coming online in the current quarter, which will help us meet excess 28nm demand that we haven't been able to fulfill. We are also actively adding capacity at our overseas bases to support our customers' long-term growth. The announced new fab to be built at our Singapore site, which will address growing 22/28nm demand, has already secured multi-year supply agreements from 2024. We also announced a collaboration with DENSO on the production of power semiconductors at USJC's 300mm fab in order to serve the growing demand in the automotive market. The collaboration demonstrates our strong commitment to supporting our customers amid constraints in the automotive value chain. As part of the industry mega-trends, the accelerating adoption of electric vehicles will serve as a growth catalyst for our automotive business. We are excited to be selected as the foundry partner for many global leading customers as we aim to expand our market share in the fast-growing automotive segment."

Co-president Wang added, "Corporate sustainability has long been a key priority for UMC, and it is now also embedded in our new company vision and mission statements, which was unveiled earlier this year. We were pleased to be chosen from over 7,500 companies for the S&P Global 2022 Sustainability Yearbook released, for which we received the Gold Class Award. The company has ambitious goals when it comes to sustainability, and we will continue prioritizing resources so that we can deliver on our ESG promises."

First quarter operating revenues increased by 7.3% sequentially to NT$63.42 billion which was primarily lifted to higher wafer shipments. Revenue contribution from 40nm and below technologies represented 38% of wafer revenue. Gross profit grew 19.0% QoQ to NT$27.50 billion, or 43.4% of revenue. Operating expenses declined 4.5% to NT$6.51 billion. Net other operating income remained relatively flat at NT$1.34 billion. Net non-operating income was NT$1.31 billion. Net income attributable to shareholders of the parent amounted to NT$19.81 billion.

Earnings per ordinary share for the quarter was NT$1.61. Earnings per ADS was US$0.281. The basic weighted average number of outstanding shares in 1Q22 was 12,283,479,334, compared with 12,254,114,875 shares in 4Q21 and 12,206,292,756 shares in 1Q21. The diluted weighted average number of outstanding shares was 12,534,728,721 in 1Q22, compared with 12,489,949,678 shares in 4Q21 and 12,381,821,873 shares in 1Q21. The fully diluted shares counted on March 31, 2022 were approximately 12,534,729,000.

Detailed Financials Section

Operating revenues increased to NT$63.42 billion. COGS declined slightly to NT$35.92 billion, which included 3.1% sequential decrease in depreciation. Gross profit grew 19.0% QoQ to NT$27.50 billion, reflecting the uptick in ASP. Operating expenses decreased 4.5% QoQ to NT$6.51 billion, as R&D fell 11.2% QoQ to NT$3.03 billion, representing 4.8% of revenue. Net other operating income was NT$1.34 billion. In 1Q22, operating income grew 26.8% QoQ to NT$22.33 billion.

About UMC

UMC (NYSE: UMC, TWSE: 2303) is a leading global semiconductor foundry. The company provides high quality IC production with a focus on both logic and specialty technologies to serve every major sector of the electronics industry. UMC’s comprehensive technology and manufacturing solutions include logic/RF, embedded high voltage, embedded flash, RFSOI/BCD and IATF-16949 automotive manufacturing certification for all its manufacturing facilities. UMC operates 12 fabs that are strategically located throughout Asia with a maximum capacity of approximately 800,000 8-inch equivalent wafers per month. The company employs approximately 20,000 people worldwide, with offices in Taiwan, China, United States, Europe, Japan, Korea and Singapore. For more information, please visit: http://www.umc.com.
